

# K15t Scroll Exporters

## Overview

This page explains how to integrate all Scroll Exporter apps (including Scroll Office) with Comala Workflows.

For best results, use the latest version of the Scroll apps and Comala Workflows app.

Exporters include:

- [Scroll Word Exporter](#) (Scroll Office app)
- [Scroll CHM Exporter](#)
- [Scroll DocBook Exporter](#)
- [Scroll EclipseHelp Exporter](#)
- [Scroll EPUB Exporter](#)
- [Scroll HTML Exporter](#)
- [Scroll PDF Exporter](#)
  - For **version 4.0.12 and above**, you need an additional app.
  - For more information, see: [K15t Scroll PDF Exporter app](#)
- *and any others that are added in future*

## How it works

When creating your [Export Scheme](#), and a workflow is activated, you can define if you want to export only the most recently Published states of content (see [Publishing](#) for instructions of setting up Workflows for publishing).

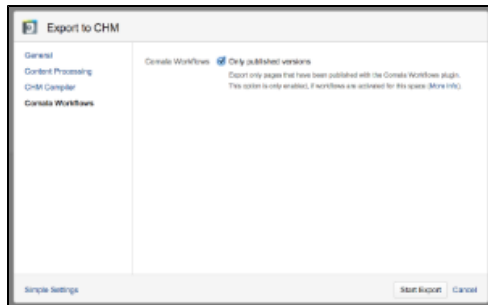

To export only published pages, for example using Scroll CHM Exporter:

- On a Confluence page, select your desired export format from the **Page Tools** menu – e.g. **Export to CHM**.
- Click **Customize Settings**, and choose **Comala Workflows**.

 When [creating](#) or [editing](#) Export Schemes, you can also enable Comala Workflows support the same way!

- Activate option **Only published versions**.
- Click **Start Export**.

Screenshot of the example above (click to zoom):

The exported pages depend on the user permissions and the status of the checkbox:

User Permission	Workflow Permission	Workflows Checkbox	Exported Pages
User can see all pages	<a href="#">Edit Content</a> or <a href="#">Admins</a>		Latest versions of all visible pages are exported.
User can see all pages	<a href="#">Edit Content</a> or <a href="#">Admins</a>		Only the pages in final state
User can see only pages in final state	<a href="#">View Content</a>		Only the pages in final state
User can see only pages in final state	<a href="#">View Content</a>		Only the pages in final state
