

Workflow setup

Overview

Some workflows will require additional **Workflow Setup** before they start.

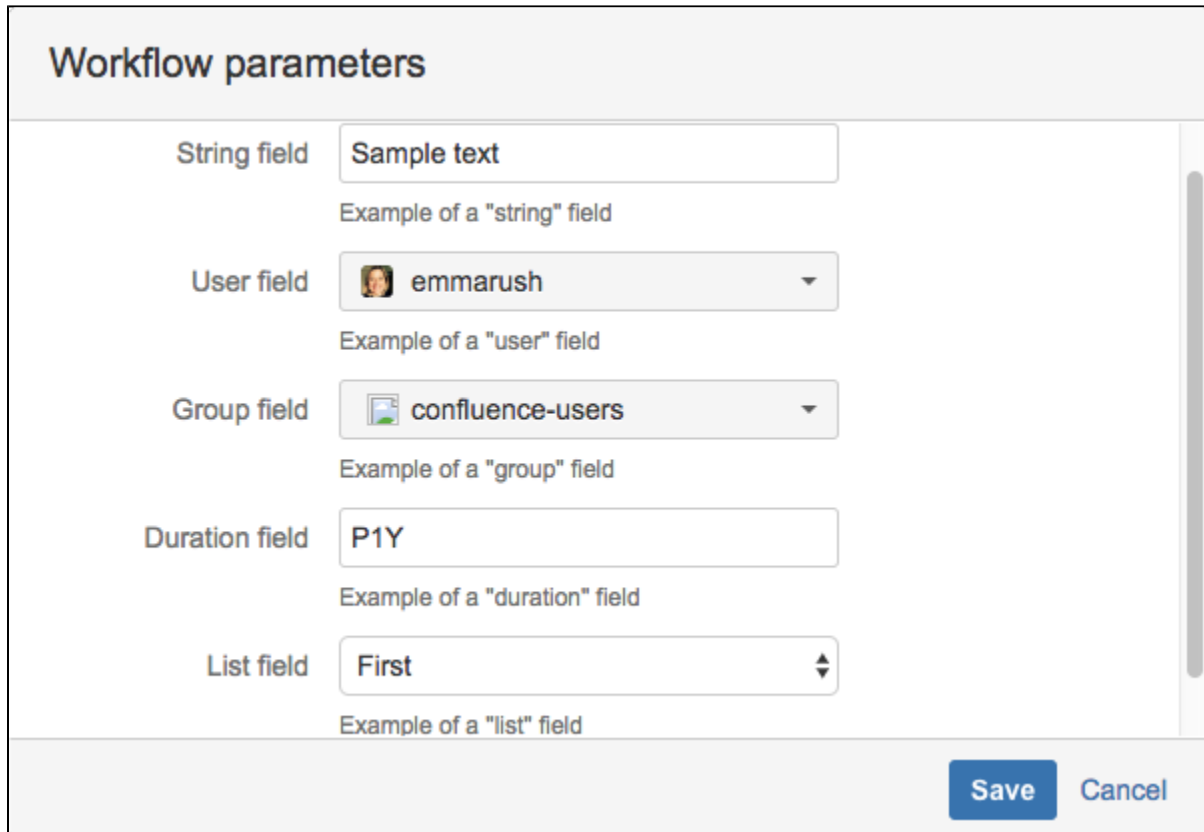

You'll see a message like this in the [Workflow Popup](#), asking you to set **Parameters**:

If the **parameters** of the workflow are altered after you've set them, you may see this screen again.

Setting parameters

Choose the **Parameters** button to open the **Workflow Parameter** screen:

A screenshot of the 'Workflow parameters' configuration screen. The title is 'Workflow parameters'. It contains five rows of parameter settings, each with a label on the left and a value in a field on the right, followed by an example text below the field. 1. 'String field' with value 'Sample text' and example 'Example of a "string" field'. 2. 'User field' with a user icon and value 'emmarush' and example 'Example of a "user" field'. 3. 'Group field' with a group icon and value 'confluence-users' and example 'Example of a "group" field'. 4. 'Duration field' with value 'P1Y' and example 'Example of a "duration" field'. 5. 'List field' with value 'First' and example 'Example of a "list" field'. At the bottom right, there are two buttons: 'Save' and 'Cancel'.

Once you've finished editing parameters, click the "Save" button and the workflow will be active in its initial state.

Editing parameters

Once you've saved the **parameters**, the [Workflow Popup](#) will return to normal – showing information about the current state, etc.

However, if you made a mistake or need to make changes, you can edit the existing parameters.

Choose the  button at the top of the screen (above the page title) to display a summary of the current workflow:

Workflow

Summary

Workflow name: Custom States Workflow

Current state: Workflow Set-up

Page parameters

[Edit parameters](#)

String field: Sample text

User field: emmarush

Group field: confluence-users

Duration field: P1Y

List field: First, Second, Third

[Close](#)

Clicking the **Edit parameters** button will take you back in to the **Workflow Parameters** screen where you can make any required changes.
