

Examples

Overview

The following is a list of all examples from the [Workflow Authoring Guide](#), [Integration Guides](#) and [Reporting Guide](#).

- [Add, remove and set page restrictions](#)
- [Adding Multiple Reviews](#) — Add multiple reviews to a content review, set assignee requirements and review dependencies
- [Adding page activity to email](#) — Include page activity report, or a link to it, in custom email notifications
- [Advanced different-space publishing](#)
- [Advanced remote-space publishing](#)
- [Assignment Examples](#) — Define who can take part in, or be assigned to, a content review.
- [Attachment events](#) — Triggering events when attachments are created, updated or removed.
- [Blog Post Events](#) — Workflow events associated with blog posts
- [Comment events](#) — Triggering events when comments are created, updated or removed, or inline comments are created or resolved on the page.
- [Communardo Metadata for Confluence app](#) — Using the Communardo metadata as value references in a workflow - including use in a custom condition for a trigger macro
- [Customise Approval Buttons](#) — How to change captions of the Approve and Reject buttons created by the `{approval}` macro.
- [Dynamic page header using a metadata value and triggers](#) — Use a trigger to display a different page header for each state in the workflow. Page header content is set as a metadata value.
- [Expiry Dates](#) — States, tasks, and messages can be set to expire on a certain date or after a certain amount of time
- [Exporting to PDF with K15t PDF Exporter](#) — Export pdf macro and example of the use of `pdf-export-success` and `pdf-export-error` event triggers
- [Fast-tracked Rejections and Approvals](#) — How to require everyone to Approve, but only need one person to Reject
- [Make tasks disable a review](#) — Two ways to use tasks to disable a review. The first way uses a precursor task state where the tasks can be set and completed. The second example uses a [Value Reference](#) as a [condition](#) to check that all tasks are complete. For the [value reference](#) method, you will need the [Reporting for Confluence app](#) in addition to Comala Document Management.
- [Message notification styles](#) — Test the `style` parameter of the `{set-message}` macro
- [Read Confirmation Events](#) — Triggering events when a read confirmation is created, updated or acknowledged, or inline comments are created overdue for the final state in a workflow
- [Reporting app - Pages in state for over 2 weeks](#)
- [Reporting app - Pages with specific workflow state](#)
- [Reporting app - Tasks on current page](#)
- [Require Parameters on State Transitions](#) — Require workflow parameter values to be set before moving into a workflow state.
- [Reviewer Authentication](#) — This example shows how to authenticate reviewers during a content review.
- [Scaffolding app - Retrieve list-data via supplier reference](#)
- [Space mode workflow application](#)
- [State expiry dates](#) — Using state expiry dates, defining them with metadata, and making them editable
- [StiltSoft Talk app](#)
- [Use metadata to increment a content version](#) — Increment a composite version number for example, major.minor.patch metadata value each time a reviewer approves the content
- [Use metadata to increment composite major, minor, patch content version on an approval decision requiring a parameter](#) — Use the `{increment-metadata}` macro to increment major.minor.patch metadata value for a single approval using three triggers.
- [Using a CQL filter in the document-state-report macro to report on grandchildren of a page](#)
