

2.7.1 Release Notes

Comala Publishing 2.7.1

February 7th, 2016

Comala Publishing 2.7.1 is a bug fix release.

Installation/Download

Install through the [plugin repository](#).

Bug Fixes and Updates

- Improvement to publishing page hierarchy where a child page that was published before its parent page was left at the target space home directory will now be adjusted to the correct position
- Fixes an issue where using the "Delete Pages added in Target Space" configuration option, pages were not deleted when source space was changed.
- Fixes an issue where the space "View Changes" option did not take the "Delete sync-label on Source after Synchronization" configuration option into account when checking page order.
