

2.6 Release Notes

Canvas for JIRA 2.6

Nov 29th 2016

This new version of Comala Canvas for JIRA brings many improvements and bug fixes.

Introducing the [Plan Mode](#), which allows users to plan issues into sprints, components or releases.

New to Canvas for JIRA?

Find out what Canvas for JIRA can do for you [here](#).

Installation/Download

Install through the [plugin repository](#) or [manually](#)

No Downgrade path from pre 2.3 releases

Due to the changes in the board model in the 2.3 release there is no downgrade path once the 2.3 release has been installed.

If you are upgrading from the 2.2 release or before, existing saved boards will be converted to the new internal model as they are used.

What's New

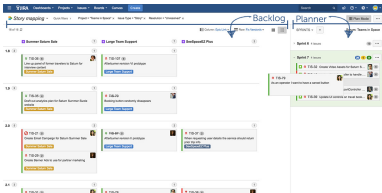

New Plan Mode

The [Plan mode](#) allows users to plan issues into Components, Releases, and Sprints.

- in order to allow these classifications make sure that Components, FixVersion/s and Sprints fields are enabled in Manage Fields.

With [Plan mode](#) you can

- drag the issues from the **Backlog** to the **Planner**
- or move issues back from the Planner by clicking on the **X** at the right end of the issue (shows up when the cursor hovers over the issue)

Updates and Bug fixes

- Other minor UI and usability fixes.
