

# Page Status Macro

## Overview

The **Page Status Macro** is used to display the current workflow state of a page.

## Permissions

Only page editors can see this macro as by default only users with edit permissions for a page can see workflow activity and draft versions of pages.

The macro will be seen by users with view permission on the draft content if global workflow visibility is configured for anybody to see draft content.

If you wish for all users to see the macro then an option is to use the [get-metadata](#) macro on the page with the metadata name instead.

## Adding the macro

To add the report to a page:

1. In the editor, choose **Insert**  **Other Macros** **All** **Page Status**
2. Choose **Insert**

Here's how the macro looks on your page:

## Customising the macro

There are no customisation options for this macro.
