

Page Properties Report macro

Overview

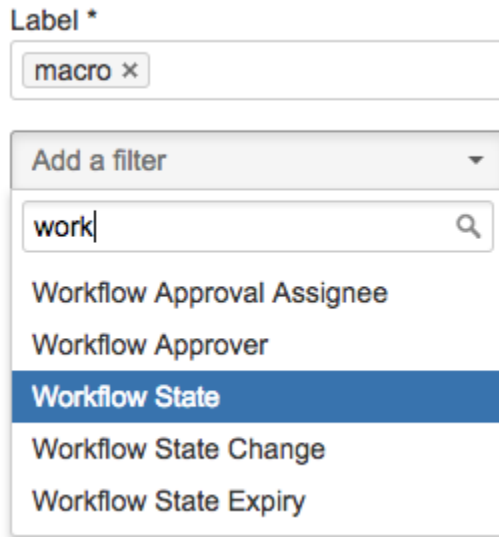

The [Page Properties Report macro](#), bundled with Confluence, allows you to compile reports of metadata stored by the [Page Properties macro](#) on pages and blog posts which have workflows applied.

Note: This feature requires **Confluence 5.8 or above**.

Setting up the report

Add the **Page Properties Report** macro to a wiki page in the usual way and [configure it to your requirements](#).

In the sidebar you'll see an option to specify a label, and, under it, an option to **Add a filter**:

Search the **Add filter** drop-down for filters containing the word **Workflow** – these are the filters added by the Comala Document Management app.

In the example above, we've selected the **Workflow State** filter. That filter automatically provides a list of all states available on your wiki, so all you need to do is choose one.

Available filters

The following workflow-related search fields are available if you are using Confluence 5.9 or above:

Filter Name	CQL Field	Type	Notes	Ver
Has Workflow	awphasworkflow	TEXT	Filter to content which has a workflow applied Use <code>true</code> as the text value.	5.1
Workflow Approval Assignee	approvalassignee	USER	Filter by assigned reviewer See also: Assigning reviewers	4.12+
Workflow Approver	approver	USER	Filter by user who approved content during a review See also: Content reviews	4.12+
Workflow State	state	TEXT	Filter by current workflow State	4.10+
Workflow State Change	statechange	DATE	Filter by date of last workflow state Transition	4.11+
Workflow State Expiry	stateexpiry	DATE	Filter by current workflow state Expiry Date See also: State expiry date	4.11+
Workflow Task Assignee	taskassignee	USER	Filter by workflow Task assignee See also: Assign a task	5.1
Workflow Name	workflowname	TEXT	Filter by workflow name	6.0

Read Confirmation Status	readAckStatus	TEXT	Filter by the read confirmation status. Possible values: pending , acknowledge , overdue	6.0
---------------------------------	---------------	------	--	-----

These fields can be used in Confluence Search, any macros that support CQL and the CQL REST API.

An example of some of the filters in action:

Workflow Approver ✕

 Dave Gee ✕

 Emma Rush ✕

Workflow Approval Assignee ✕

 Emmet Paris ✕

Workflow State ✕

Approved ✕

Workflow State Change ✕
