

_5.7 Release Notes Common

Workflow Builder is now available

Workflows 5.7 now includes the first public release of the [Using Workflow Builder](#). You can now edit workflow states, transitions, approvals and other parameters through a graphical interface.

The screenshot shows the Workflow Builder interface for a "Simple approval workflow". On the left, there is a sidebar with a "Page Layout" section containing three items: "Workflow Instructions: Follow this instructions" (INFO), "Page Header" (ALL), and "Page Footer" (READ ONLY). The main area displays a workflow diagram with three states: "READY" (blue box), "IN PROGRESS" (orange box), and "APPROVED" (green box). Transitions are labeled "updated" between "READY" and "IN PROGRESS", and between "IN PROGRESS" and "APPROVED". There are also two curved arrows between "IN PROGRESS" and "APPROVED", one labeled "approved" and the other "updated". The interface includes a top navigation bar with "Workflow", "+ State", and "+ Parameter" buttons, and a "Save" button. A footer note states: "Some features are not available yet, but you can still use the previous markup editor if needed."
