

Updating Comala Document Management for Confluence Server to the Latest Version

For general app upgrade guidance, see Atlassian's [Updating Add-ons guide](#).

We strongly recommend doing a practice upgrade in a development or test environment first in order to identify any potential problems.

For large deployments, we also recommend doing a practice upgrade in a staging environment which closely resembles the production or live environment, and then performing some acceptance tests to ensure that workflow functionality, notifications, etc., are all working as expected.

Always take a full backup before updating a production or live environment.

If you run in to problems, please contact [Comalatech Support](#).

You may wish to create and attach a **Support Package** using the [Support Console](#) to help with any request.

The **Support Package** can help in debugging queries and to resolve workflow issues and provides detail of your Comalatech app configuration and active and disabled workflows.

Version Specific Update Instructions

Choose your version in the list below and follow the steps provided.

- [Upgrade to 6.14.x](#)
- [Upgrade from 6.4 to 6.5](#)
- [Upgrade from 5.x to 6.8.1x](#)
- [Upgrade from 5.x to 6.8](#)
- [Upgrade from 5.0.x to 5.1.x](#)
- [Upgrade from 4.x to 5.x](#)
- [Upgrade from 3.2.x to 5.x](#)
- [Upgrade from 3.1.x to 5.x](#)
- [Upgrade from 3.0.x to 5.x](#)
- [Upgrade from 1.x or 2.x to 5.x](#)
