

# Export Space to PDF

## Overview

Comala Document Management integrates with the native Confluence [PDF export at space-level](#):

- For pages with no workflow, the latest version will be exported
- For pages with a workflow that doesn't define a Published state, the latest version will be exported
- For pages with a workflow that uses [Same-space publishing](#) (one that contains a state with `final=true`), only the latest Published state pages will be exported
  - There is no way to publish Draft state content at the Space level (without using third-party apps, listed below)

The space-level XML and HTML exports are unaffected, and will publish the latest version of content regardless of state.
