

Reporting app - Pages in state for over 2 weeks

Overview

This example requires the [ServiceRocket Reporting for Confluence app](#).

Example

The following report uses the `{workflow-reporter}` macro to list all the pages in the **AWP** space which have a current workflow state of **For Review**.

It then filters those results, using the `date-filter`, to only include pages that have been in the same state for more than two weeks (from the current date).

```
{report-table}
{workflow-reporter:spaces=AWP|states=For Review}
{date-filter:workflow:state > date|maxValue=-2w}
{workflow-reporter}

{report-column:title=Page}{report-info:content:title|link=true}{report-column}
{report-column:title=Last published}{report-info:states > Published > date > dd/MMM/yyyy}{report-column}
{report-column:title=Send for review on}{report-info:workflow:state > date > dd/MMM/yyyy}{report-column}
{report-column:title=Last Updated}{report-info:content:modification date > dd/MMM/yyyy}{report-column}
{report-column:title=Last Updated By}{report-info:content:modifier > full name|link=true}{report-column}
{report-column:title=Tasks?}{report-info:workflow:tasks > 1 > name}{report-column}
{report-column:title=Labels}{report-info:labels}{report-column}

{report-empty}
  There are no pending pages
{report-empty}
{report-table}
```

Output

Page	Last published	Send for review on	Last Updated	Last Updated By	Tasks?	Labels
Misc Macros	04/Mar/2010	27/Apr/2010	28/Apr/2010	Roberto Dominguez		approvechildren
workflowreport macro	04/Mar/2010	27/Apr/2010	27/Apr/2010	Roberto Dominguez		
Value Reference	04/Mar/2010	27/Apr/2010	27/Apr/2010	Roberto Dominguez	Document Workflow Supplier	approvechildren
