

5.2 Release Notes

Comala Workflows 5.2

27 Feb 2018

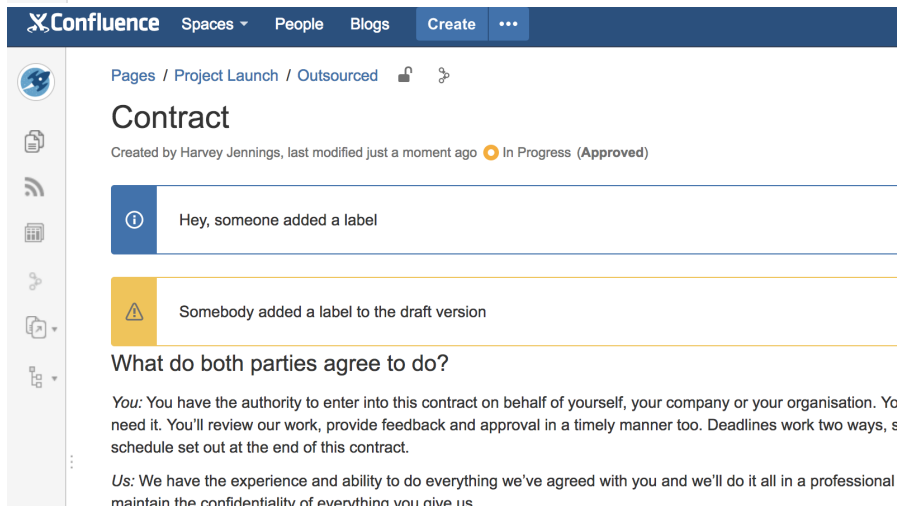

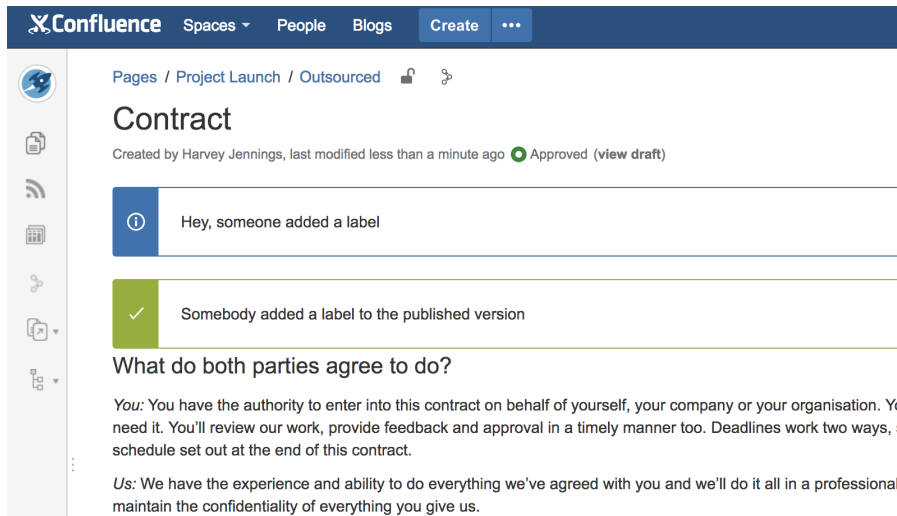

Comala Workflows 5.2 is a feature update release.

[Feature Tour](#) | [Installation](#) | [Update / Change](#) | [Support](#)

What's New

Workflow Messages view and role specific

The messages displayed using the `set-message` macro can now be specific to the page view and users/groups.

```
{trigger:labeladded}
{set-message:view=both}Hey, someone added a label{set-message}
{set-message:style=success|view=published}Somebody added a label to the published version{set-message}
{set-message:style=warning|view=draft}Somebody added a label to the draft version{set-message}

{set-message:view=both|user=admin}Hey admin, only you can see this{set-message}
{set-message:style=success|view=published|group=confluence-users}@user@ you belong to the confluence-users group{set-message}
{set-message:style=warning|view=draft|user=admin}Hey admin, this is the draft version{set-message}
{trigger}]
```

- Use the new `group` parameter to specify a message to be displayed to a group of users.
- Use the new `view` parameter to control if a message should be visible on the published (public) or normal view of a page.

Other Updates and Bug fixes

- Fixed an issue preventing the confluence page gadget rendering correctly when a workflow is active on a page.
- UX/UI updates including:
 - Improved the error handling display when there is a problem with the maximum number of assignable users.
 - The progress bar is now always visible in the workflow dialog.
 - Now it is possible to perform actions in the status dialog (if any available) of the published view.
 - Style updates on the page activity filter buttons to match the new look in Confluence 6.7
