

# Confluence Audit Log

## Overview

The Comala Document Management app keeps a full audit trail of key events such as configuration, template and parameter edits.

## Displaying the Audit Log

If you're using [Confluence 5.10](#) or above, the Comala Document Management app will use the [Confluence Audit Log](#) to track important changes to workflows.

To access the Audit Log:  **General Configuration Audit log**

To filter the audit log to Workflow specific events, enter "Comala Document Management" in to the filter box at the top of the audit log.

## What is tracked?

- Comala Document Management app:
  - installing
  - updating
  - enable/disable
  - uninstalling
- App configuration:
