

# attachment-macro

Creates a link to an attachment. It acts in a similar way as the regular links (using '[' and ']') but it used to record versions of attachments in approvals. It can be used also to access specific versions of attachments.

Parameters	Mandatory	Default	Description
attachment	Yes		The name of the attachment to link to.
version	No	latest version of the file	The version of the attachment to link to.
approval	No		The approval name to obtain the attachment version from.
alias	No	attachment	Alternative name to display for the link
tip	No	attachment	Specify the link title property (for when the cursor hovers over the link).

## Wiki Examples

```
{attachment:table.xls}
{attachment:attachment=table.xls}
```

Creates a link to `table.xls`.

```
{attachment:table.xls|version=1}
```

Creates a link to version 1 of the attachment `table.xls` into the page.

```
{attachment:table.xls|approval=Reviewer}
```

Creates a link to whatever version of the approved `table.xls` was current when it received the latest *Reviewer* approval.

```
{attachment:alias=The table|attachment=table.xls}
```

Creates a link to `table.xls` displaying *The table* as the link name.

```
{attachment:alias=The table|attachment=table.xls|tip=Download the file}
```

Creates a link to `table.xls` displaying *The table* as the link name and *Download the file* as tooltip.
