

renderwithlatest macro

Renders the containing body in the latest version of the page, even if accessing a published version of a page. This is a work around macro to deal with issues such as [CONF-23772](#)

Confluence 4

You need to include the macro in the page as wiki markup

Example

```
{renderwithlatest}
  {pagetree}
{renderwithlatest}
```

Will properly render the {pagetree} macro.
