

# Comment events

## Overview

Triggering events when comments are created, updated or removed, or inline comments are created or resolved on the page. In the following examples we show how to display a message when users add / update / remove comments or add / resolve inline comments on a page or blog post.

## Comment created

```
{workflow:name=Comment added}
  {state:In Progress}
  {state}
  {state:Approved}
  {state}
  {trigger:pagecommentcreated}
    {set-message}A comment was added to the page.{set-message}
  {trigger}
{workflow}
```

## Comment updated

```
{workflow:name=Comment updated}
  {state:In Progress}
  {state}
  {state:Approved}
  {state}
  {trigger:pagecommentupdated}
    {set-message}A comment was updated on the page.{set-message}
  {trigger}
{workflow}
```

## Comment removed

```
{workflow:name=Comment removed}
  {state:In Progress}
  {state}
  {state:Approved}
  {state}
  {trigger:pagecommentremoved}
    {set-message}A comment was removed from the page.{set-message}
  {trigger}
{workflow}
```

## Inline comment created

```
{workflow:name=Inline comment added}
  {state:In Progress}
  {state}
  {state:Approved}
  {state}
  {trigger:inlinecommentcreated}
    {set-message}An inline comment was added to the page.{set-message}
  {trigger}
{workflow}
```

## Inline comment resolved

```
{workflow:name=Inline comment resolved}
  {state:In Progress}
  {state}
  {state:Approved}
  {state}
  {trigger:inlinecommentresolved}
    {set-message}An inline comment was resolved.{set-message}
  {trigger}
{workflow}
```
