

Blog Post Events

Overview

The following examples illustrate the various events associated with blog posts.

Created

Note: The `newscreated` event only works in [Space Mode](#).

```
{workflow:name=News created}
  {state:Test}
  {state}
  {trigger:newscreated}
    {set-message:style=info}A blog post was created{set-message}
  {trigger}
{workflow}
```

Updated

```
{workflow:name=News updated}
  {state:Test}
  {state}
  {trigger:newsupdated}
    {set-message:style=info}A blog post was updated{set-message}
  {trigger}
{workflow}
```

Reviewer assignments

There isn't a specific event for removing a reviewer on a blogpost, so metadata is used to help identify the news in the `approvalunassigned` event.

 A page refresh is required after un-assigning to see the message update.

```
{workflow:name=News assignees}
  {state:Test|approved=Test|rejected=Test}
    {approval:Test|assignable=true}
  {state}
  {trigger:newsapprovalassigned|approval=Test}
    {set-message:style=info}A blog post reviewer was assigned{set-message}
    {set-metadata:isNews}true{set-metadata}
  {trigger}
  {trigger:approvalunassigned|approval=Test|@isNews@=true}
    {set-message:style=info}A blog post reviewer was unassigned{set-message}
  {trigger}
{workflow}
```

Approvals / Rejections

```
{workflow:name=News approve and reject}
  {state:Test|approved=Test|rejected=Test}
    {approval:Test}
  {state}
  {trigger:newsapproved|approval=Test}
    {set-message:style=info}A blog post was approved{set-message}
  {trigger}
  {trigger:newsrejected|approval=Test}
    {set-message:style=info}A blog post was rejected{set-message}
  {trigger}
{workflow}
```

State changed

```
{workflow:name=News state change}
  {state:Test|submit=Another state}
  {state}
  {state:Another state}
  {state}
  {trigger:newsstatechanged}
    {set-message:style=info}A blog post workflow state changed{set-message}
  {trigger}
{workflow}
```
