

_6.12 Release Notes Common

Automatically create PDFs of your Confluence pages

- A new 'pdf-export' action macro allows you to automatically create PDF of your content using [K15t Scroll PDF Exporter for Confluence](#) and attach it to the page.
- For example, the action can be used to capture a PDF of a page the moment it is approved.

```
{trigger:statechanged|state=Approved}  
  {pdf-export}  
{trigger}
```
