

# Working with Boards

## Working with Comala Boards

Comala Boards can be added to existing Confluence pages using the Comala board macro or Comala Boards Blueprints can be used to create new pages with boards.

- [Add a board to a page](#)
- [Create a new page with a board using a Boards Blueprint](#)
- [Customize a board](#)
- [Edit a board](#)
- [Add a container](#)
- [Customize a board container](#)
- [Add a container name, description and one or more labels](#)
- [Add a card to a container](#)
- [Add a page-card to a container](#)
- [Add an existing Confluence page to a container](#)
- [Convert a card to a page](#)
- [Move pages and cards between containers](#)
- [Viewing board container pages and cards](#)
- [Remove all cards](#)
- [Importing boards](#)

The [properties](#), layout and look and feel of a board can be [customized](#) using the [board editor](#).

Any content displayed on the board from other pages can be [filtered by label, space, and hierarchy](#). Container labels can be used to [filter the content for each container](#).
