

Workflow Supplier

Overview

The Workflow Supplier provides workflow information to third-party apps, such as the [Reporting for Confluence app](#), using the [Confluence Supplier Library](#).

Examples

For examples, see: [ServiceRocket Reporting for Confluence app](#)

Details

Name	Workflow Supplier
Prefix	<code>workFlow</code> (optional)
Supported Content	Confluence Pages , News (blog posts), States , Tasks and Approvals

Supported keys

Key	Content Types	Return Type	Description
<code>state</code>	Pages and News items	State	Current workflow state of the page or blog post.
<code>states > all</code>	Pages and News items	List of State	A list of all states the content (page or blog post) has been transitioned through. List order: Oldest Newest (the last object in the list is the current workflow state).
<code>states > StateName</code>	Pages and News items	List of <i>specified</i> State	A list of all the state objects of the specified StateName which have occurred for the current content (page or blog post). List order: Oldest Newest.
<code>approvals</code>	Pages and News items	List of <i>approved</i> Approval	A list of all approved content reviews for the current state of the workflow. You can get a list of all approvals via a State object.
<code>tasks</code>	Pages and News items	List of <i>active</i> Task	A list of all tasks for the current state of the workflow, filtered to those that are not yet complete. You can get access to all tasks and completed tasks via a State object.
<code>metadata > Value Name</code>	Pages and News items	Text	Retrieve a value set by the <code>{set-metadata}</code> macro or the Comala Metadata app . For more information, see Metadata references .
