

get-metadata macro

[Where to use it?](#) | [Parameters](#) | [Example](#) | [All examples](#) | [See also](#)

Overview

The `{get-metadata}` macro is used on wiki pages (or content rendered to wiki pages) to retrieve and display [Value References](#), including:

- [Attribute References](#)
- [Metadata references](#)
- [Page Property References](#)
- [Parameter References](#)
- [Supplier References](#)
- [Page and User references](#)

Where to use it?

Optional.

One or more `{get-metadata}` macros can be used in wiki content (pages, blog posts).

It can also be used in macros that render wiki content in the context of pages and blog posts.

- [add-comment macro](#) — Comment on a page or blog post
- [increment-metadata macro](#) — Increment a metadata value to support custom versions (available from v6.11+)
- [pagefooter macro](#) — Add content to page footer
- [pageheader macro](#) — Add content to page header
- [send-email macro](#) — Send an email
- [set-message macro](#) — Add/remove a page message
- [workflow macro](#) — Defines a workflow template

It can also be used in [page templates](#) and [blueprints](#).

Parameters

Parameter	Required	Default	Notes	Ver
<code>name</code>			<p>The metadata or value reference to display</p> <ul style="list-style-type: none">• Workflow Parameter Name• Value Name• Supplier Reference• etc <p>Note</p> <ul style="list-style-type: none">• do not enclose the value reference in @ ("at") symbols• use <code>awpState</code> value reference to retrieve the current workflow state name	3.0.3+

Example

To retrieve a value reference called `@Project Lead@`, you would use the following (note: no @ symbols):

```
{get-metadata:name=Project Lead}
```

 Metadata values created with the `{set-metadata}` macro are only indexed by Confluence and appear in the Confluence search if the [Comala Metadata app](#) is installed.
