

# Space Mode

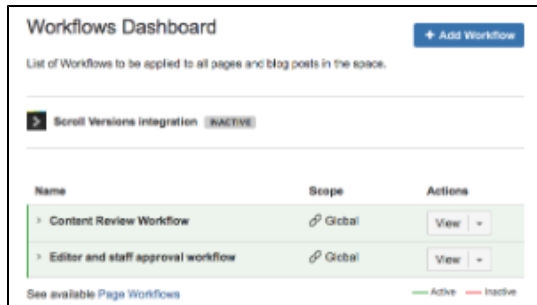

In Space Mode, workflows are applied to all content in a space (optionally filtered by label or content type) and templates are centrally managed. Recommended for production use!

- **Workflows applied automatically on page creation**
- Space admin chooses which templates to apply
- Templates are centrally managed at Space / Global level
- Changes to the template affect all content using that template

## How do I enable Space Mode?

You'll need [Space Admin](#) privileges.

Add one or more templates to the [Workflows tab](#) ("Workflows Dashboard") – it should look a bit like this:

## Where do I manage templates?

Both Space and Global scoped templates can be used:

- [Workflows - Space Tools](#)
- [Workflows - Global](#)

Templates can also be imported:

- [Import - Space Tools](#)
- [Import - Global](#)

## App configuration

Setting	Where	Notes
Space Workflows	<a href="#">Configuration - Global</a>	<a href="#">Confluence Admins</a> can limit which spaces are allowed to use Space Mode.
