Comala Publishing Configuration - Global

Comala Publishing Global Administration

Global administrators can configure settings for Comala Publishing in the global configuration for the app.

PUBLISHING

Configuration

The global configuration screen allows you to manage the general configuration of the Comala Publishing app.

Publishing Configuration

Permissions settings

Set the copiers and publishers groups, only users that are members of these groups will be able to use Comala Publishing.
Set the comma separated list of space keys that can be published, or use `ANY` for any Space.

Publishers Group	confluence-administrators
Copiers Group	confluence-administrators
Publishable Spaces	ANY

Sync Label

The sync-label can be used by Space Administrators to control the content that Comala Publishing copies or publishes.

Label	syncme

Content Properties

Indicate the comma-separated list prefixes of the content properties to be copied.

Properties prefixes	com.communardo,metadata

Default values: **metadata** (Metadata defined by the Comala Metadata and Comala Document Management apps), **com.communardo** (Metadata defined by the Communardo Metadata app)

Other

☑ Send Usage Statistics
Disable to stop sending usage statistics to Comalatech

[Save] Cancel

A global administrator can edit

- **Permission settings** to set the users who can copy or publish content and list the **Publishable Spaces** that can be published or copied
- the **Properties prefixes** for content properties that can be copied or published
- the content **Label** that can be used as the **sync-label** if required to define pages and/or blog posts that should be synchronized when a draft space is published

Permissions settings

Global admins can define

- the space administrators who are allowed to publish or copy content
- the list of spaces that can be published

Permissions settings

Indicate the copiers and publishers group, as well as the list of keys of the spaces that can be published. Use `ANY` for any Space.

Publishers Group	confluence-administrators
Copiers Group	confluence-administrators
Publishable Spaces	ANY

Setting	Description	Default
Publishers Group	Only space administrators that are a member of the Publishers Group are allowed to publish a space.	Default: `confluence-administrators`
Copiers Group	Only space administrators that are a member of the Copiers Group are allowed to copy a space.	Default: `confluence-administrators`
Publishable Spaces	Only the spaces indicated in the publishable spaces list can be published.	Default: ANY

The space to be published to (the destination space) is configured in the **space tools Publish screen** in the space to be published (the source/draft space).

Content properties to be copied

Global admins can define the information stored as content properties to be copied.

Content Properties   ✏ Edit

Indicate the comma-separated list prefixes of the content properties to be copied.

Properties prefixes   **com.communardo,metadata**

Default values: **metadata** (Metadata defined by the Comala Metadata and Comala Document Management apps), **com.communardo** (Metadata defined by the Communardo Metadata app)

Apps such as Metadata and Scaffold store information as Content Properties and each property has its own name. The default settings are

- **metadata** is metadata defined by the Comala Metadata and Comala Document Management apps
- **com.communardo** is metadata defined by the Communardo Metadata app

Setting	Description	Default
Properties prefixes	Define the prefixes of those properties you want to get copied.	Default: **metadata, com.communardo**

Setting the content sync-label

Global admins can set the content label that a space admin can (optionally) use to configure content to be synchronized.

Sync Label   ✏ Edit

The sync-label can be used by Space Administrators to control the content that Comala Publishing copies or publishes.

Label   **syncme**

A space administrator can configure space publishing to

- include content properties when publishing or copying content
- use or ignore the **sync label** as a filter for publishing

Setting	Description	Default
Label	Define blog posts and pages to be published. Add one or more labels in a comma-separated list. This label is used as the **sync-label** for publishing (see Co nfigure Publishing Settings - space tools)	ⓘ Default global value for the label on app install is **syncme** ⚠ A space admin must choose whether to use the **sync-label** for publishing. The default space setting is to ignore the **sync-label**.

Usage Statistics

You can also choose to uncheck the **Send Usage Statistics** checkbox to disable the sending of usage statistics to Comalatech.

☑ Send Usage Statistics

Disable to stop sending usage statistics to Comalatech
