

Page Mode

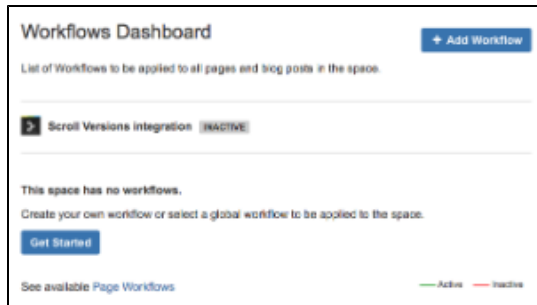

In Page Mode, workflows are applied on a page-by-page basis, so page has its own unique workflow template. Great for development, testing and training, but difficult to manage!

- **Workflows applied manually on page-by-page basis**
- End users choose which workflows to apply
- Templates are cloned to pages, so each page has unique template
- Changes to template only affect the page it's used on

How do I enable Page mode?

You'll need [Space Admin](#) privileges.

Remove all the templates from the [Workflows tab](#) ("Workflows Dashboard") – it should look like this:

Where do I manage templates?

On pages or blog posts:

- [Add Workflow - Page Tools](#)
- [Edit Workflow - Page Tools](#)

There's also a repository of templates in Space Tools:

- [Page Workflows - Space Tools](#)

App configuration

Setting	Where	Notes
Page Workflows	Configuration - Global	Confluence Admins can limit which spaces are allowed to use Page Mode.
