## Organize, categorize, and visualize your pages with configurable checklists

**Comala Lists** allows you to create your own checklists using labels, metadata, wiki content or page attributes

- review, categorize and organize your pages
- use your own metadata attributes in pages
- look up page attributes such as creator, last modifier or modification

The **Comala Lists** app is a set of macros to generate list tables for a subset of pages (children of a given parent-page and/or filtered by a label).

The app provides a handy way to

- [Construct to-do lists](#)
- [Manage the quality of your pages, stages of your projects, or acceptance testing and requirements.](#)
- [Create a checklist of pages to easily manage labels, and keep your content organized](#)
- [Easily create metadata and add values for your list pages](#)

For each page labels can be added, removed or updated by means of the pre-defined columns, values can be edited, and text segments can be added.

### Construct to-do lists

Create sophisticated checklists for requirements review, projects tracking, or "to do" lists.

### to do list to get things done

Created by admin, last modified just a moment ago

to do list to get things done	Urgent?	Where in my life?	Actions Notes	To do	Doing it NOW!	It's really done!
<a href="#">Film nite plan for next month</a>	Idea for later! ▾	Social ▾	Friend invites!!!!	✓	✗	✗
<a href="#">Mum's 50th birthday party plan</a>	Really, really urgε ▾	Home ▾	Surprise	✗	✗	✓
<a href="#">Project Presentation</a>	Really, really urgε ▾	Work ▾	This coming Wec	✗	✓	✗
<a href="#">School parents tutor eve bookings</a>	Like needs done ▾	Home ▾	Use book app	✗	✓	✗
<a href="#">Summer holiday plan</a>	So so .... ▾	Something else ▾	Beach/explore/w	✓	✗	✗

**Manage the quality of your pages, stages of your projects, or acceptance testing and requirements.**

# Project Management Summary

Created by admin, last modified just a moment ago

Project Management Summary	backlog	inprogress	inreview	approved	forupdate
Features Definition	✗	✗	✓	✗	✗
Project PID	✗	✗	✗	✓	✗
Project Requirements	✗	✗	✗	✓	✗
Prototype Development	✗	✓	✗	✗	✗
Release Candidate Production	✓	✗	✗	✗	✗
Test Cycle Development	✗	✓	✗	✗	✗

Comala List can be used to manage your own document workflow using content labels to identify the process stages.

## Create a checklist of pages to easily manage labels, and keep your content organized

Articles	Draft	In Review
Discounts & Special Offers	✗	✗
How far in advance can I book tickets?	✓	✗
Pets on Transit	✗	✗
Rail Network Map	✗	✗
Senior citizen railway concessions & railcards	✗	✗
Ticket Types & Fares	✗	✓

## Easily create metadata and add values for your list pages

Add text boxes and define your own page attributes as metadata.

# Operating Teams

Operating Teams	Current Lead Manager
CEO Rocket Leadership	<input type="text" value="roberto"/>
Developer Americas	<input type="text" value="mary"/>
Developers Euro	<input type="text" value="sergey, dyson"/>
HR Development	<input type="text" value="martha"/>
Marketing and Visual Identity	<input type="text" value="saul, milton"/>
Pipeline team	<input type="text" value="ma-sei, tarsem"/>
Product Futures	<input type="text" value="albert, pablo"/>
Project Leadership	<input type="text" value="elon"/>
Sprint Management	<input type="text" value="usain"/>
Support	<input type="text" value="joyella"/>
Talent Development	<input type="text" value="kinsey"/>
Wellness	<input type="text" value="florence"/>

Use the [list input](#) macro to set the metadata name as the column heading. The values can be set as text, labels or limited to users who are members of a Confluence user group.

You can use the [list metadata](#) macro to retrieve and display the values as read-only.

## Main Features

Here is a brief description of the main features of Comala Lists

<b>Labels</b>	The column values are labels that are added, removed or updated on their corresponding page.
<b>Metadata Attributes</b>	Attributes are stored as page metadata, so they can be accessed directly using the add-on (in the columns or directly in the page with the provided macros) or through the <a href="#">Metadata plugin</a> .
<b>Security</b>	The macro checks the permissions to ensure that the user is allowed to see the content and modify it.
<b>Change log</b>	All the changes made through the checklist are logged and the <a href="#">history can be accessed through a macro</a> .
<b>Wiki segments</b>	<a href="#">Wiki segments can be defined</a> so they get rendered for each of the checklist's pages, allowing use by other plugins to produce powerful reporting.
