

Adding page activity to email

Overview

This example shows how to include the `{pageactivity}` macro, or a link to the [Activity Report - Content](#), in a custom email notification.

Including a link

To include a link, use the `@pageactivity@` [Predefined reference](#):

```
{workflow:name=Email activity link}
  {state:Editing|submit=Review}
  {state}
  {state:Review}
  {state}
  {trigger:statechanged|state=Review}
    {send-email:user=@author@|subject=@pagetitle@ submitted for review|mimetype=text/html}
      The @type@ @pagelatest@ has been submitted for review by @user@.

      For details, see: @pageactivity@
    {send-email}
  {trigger}
{workflow}
```

Including the report

To include the report, use the `{pageactivity}` macro in the email body:

```
{workflow:name=Email activity link}
  {state:Editing|submit=Review}
  {state}
  {state:Review}
  {state}
  {trigger:statechanged|state=Review}
    {send-email:user=@author@|subject=@pagetitle@ submitted for review|mimetype=text/html}
      {pageactivity:maxentries=5}
    {send-email}
  {trigger}
{workflow}
```

Permissions

When used in an email, the report (or link to it) will always be included in the message regardless of who the email is sent to.

Same-space publishing

If your workflow uses [Same-space publishing](#), the activity report will only list entries up to and including the most recently published version of content.
